

Optional *Lateral Slide* Feature for ET2, ET3 and Milan Series

Because many keyboard platforms are usually installed in the center of the corner, the mouse surface side is 8" to 10" wider than the opposite side. This makes the mouse surface more "bouncy" and off center.

The *Lateral Slide* brings the mouse surface closer to the center. The 6 1/2" *Lateral Slide* is parallel to the front of the work surface. The *Lateral Slide* hardware does not allow front to back movement, only movement from side to side.

To order the *Lateral Slide* feature, add "- LS" to your ET2, ET3 or Milan Platform part number.
